Technical Skills

- **Operating Systems & Shell:**
  - Git,
  - Linux (Arch, Debian),
  - Windows,
  - Android Tweaking.
- **Systems Architecture:**
  - Nginx (Reverse Proxy/Load Balancing)
  - Elasticsearch
  - MySQL Master-Slave Replication.
- **Virtualization:**
  - Docker (Deployment & Orchestration)
- **Databases:**
  - MySQL (Master-Slave Setup).
- **Programming Languages:**
  - JS
  - PHP
  - Java
  - C

Soft Skills

- Attention to detail
- Time management and multitasking
- Adaptability and continuous learning
- Critical Thinking

About Me

Results-driven Associate in Computer Technology student and CLI enthusiast seeking a position that leverages my technical skills . Hands-on experience with Linux (Arch/Debian) and Docker for deploying reproducible environments, including MySQL Master-Slave replication and Nginx configurations. Proven ability to automate workflows—reducing task completion times by 80% and dedicated to applying a disciplined, problem-solving approach to real-world infrastructure challenges.

Education

GWA: 1.4913

Associate in Computer Technology

Major in Software Development

University of San Jose-Recoletos

Corner P. Lopez and Magallanes Streets,Cebu City

Professional Experience

TECHNICAL SUPPORT — **AUG 1 2022 - JAN 25 2023**

QUALFON

Cebu IT Park, Skyrise 3, Jose Maria del Mar St, Brgy Apas, Cebu City

SALES CUSTOMER SUPPORT — **SEP 8 2023 - NOV 20 2023**

TECHMAHINDRA

Filinvest Towers, Abad St, Cebu City, 6000 Cebu

Relevant Experience

ML Music Editor:

Developed an integrated web application that streamlines audio replacement, reducing task completion time from 5 minutes to 1 minute.

CodeRED Placer: A Hackathon Against OSAEC

Developed a centralized database architecture to synchronize real-time reports across multiple Local Government Units (LGUs) to combat OSAEC.

Projects (Active Development)

Containerized Infrastructure

- Distributed Data Architecture (MySQL): Implemented a Master-Slave replication setup within Docker to automate data synchronization; currently for data backup and failover.
- Search & Indexing Engine (Elasticsearch): Developed a project in Docker to fetch and index Gmail data into Elasticsearch for high-speed full-text searching, working on improving data ingestion pipelines.

Host-Based Systems & Applications

- High-Availability Web Server (Nginx): Configured Nginx to distribute traffic between multiple servers, ensuring service redundancy and consistent availability.
